Model: TMI-T3

Made in Europe

WHEELIE BIN TIPPER

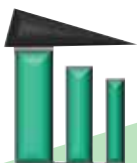

The TMI-T3 is designed to tip bins of various sizes. During tipping the container is automatically clamped on the comb or cams, which makes the machine very easy to use. Smart dimensions in combination with a universal pick-up system, allows tilting containers of 120 to 1100 liters without additional attachments.

A common application of the TMI-T3 is using them as dock shelter tippler. By the compact building height and small tip radius, the machine mostly fits directly into the existing dock. The containers can be emptied into the compactor behind.

It's also possible to use the TMI-T3 for tipping containers into open top containers.
